

The Environmental Consultant

Environmental consulting firms offer technical support for compliance with federal, state, and local environmental laws and regulations. They concentrate on general compliance issues. Consultants act as a second set of eyes to client operations, giving a new perspective on ways to improve operations or minimize waste streams. Businesses view them as a temporary supplement to their staff resources and knowledge base.

Selecting a consultant for your facility evaluation.

Four Environmental consultants have been pre-screened by the City of Battle Creek to provide evaluations for the Facility Risk Evaluation Program.

Each of the experienced consultants has diverse experience and areas of expertise to help you meet the needs of your business.

What you need to do:

1. Determine what information your business needs.
2. Plan what you want to do with the information when you get it.
3. Review the consultant qualifications. Information on each consultant selected to work with the Facility Risk Evaluation Program is available for your review by calling (269) 966-0712.
4. Select the consultant that can best serve your business. Look at projects they have successfully completed. Are they similar to yours?

This program is being offered on a one-time only basis and is being paid for by grant monies made available to the City of Battle Creek for businesses within its drinking water protection areas.

Approved Consultants

The following list of Environmental Consultants have been selected to perform facility risk evaluations for the City of Battle Creek's Wellhead Protection Program.

Envirologic- A full-service environmental firm experienced in helping businesses improve and meet their goals through environmental management and compliance programs, risk management, pollution prevention, and property assessment and cleanup.
